

BIPEA OFFERS A NEW PROFICIENCY TEST IN THE FIELD OF PHARMACEUTICALS

RESIDUAL SOLVENTS IN EXCIPIENTS

November 2022,

BIPEA has launched a new Proficiency Testing Schemes (PTS 98) which will allow testing laboratories to evaluate their analytical performance by analyzing samples of residual solvents in excipients.

For this trial, laboratories will be able to analyze a polyethylene glycol (PEG) matrix according to their usual methods on 2 parameters: ethylene oxide and dioxane.

For more than 50 years, BIPEA has provided a complete range of proficiency tests and external reference materials for testing laboratories involved in quality control in various fields (environment, food, cosmetics, pharmaceuticals).

To learn more about the "**PTS 98 – Residual solvents in excipients**", as well as the full range of proficiency tests, please feel free to contact BIPEA:
